The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed swanned and/or inscribed by International Geronological Institute (IGLI). A laboratory grown diamond is one that has essentially the same chemical, physical and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). This is a manufactured (man-madb) diamond produced by CVD (chemical vapor depation) or by HPHT (high pressure high temperature) growth processes and may include post-growth treatments to after the color. IGL employ and utilizes those techniques and equipment currently available to IGL, including, without limitation, 10X magnification, corrected triple laupe, binocular microscope, matter color comparison stores, non-contact-optical measuing device. Spectraphotemeter and such other instruments and/or processes as deemed appropriate by IGL In the case where diamond melse is set in a mounting, a random testing procedure, regarding the diamonds being of natural of laboratory created origin will be performed. This Report Includes dwanced security features A duly accredited geneologist or jeweler can advise you with respect to the importance of and interviet/out-spip-there.
